The products of the invention are useful in defining the interaction of human Type 2 RNase H and antisense oligonucleotides and identifying methods for enhancing this interaction so that antisense oligonucleotides are more effective at inhibiting their target mRNA. The products can be used for enhancing the efficacy of antisense oligonucleotide therapies. This sequence represents the human type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated human RNase H polypeptide and nucleic acid, used to develop agents for enhancing the efficiency of antisense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Type 2 RNase H; oligonucleotide-RNA duplex; cleavage; antisense therapy; interaction; target mRNA; human.

The sequence consists of two portions, one of which is capable of supporting cleavage of a complementary target RNA and the other of which is incapable of supporting such cleavage. These can be used to enhance the effectiveness of antisense therapies. The present sequence is human RNase H1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 286 AA;

Also described is a compound 8 to 50 nucleobases in length targeted to the nucleic acid encoding the human RNase HII polypeptide, where the compound specifically hybridises with and inhibits the expression of a human RNase HII polypeptide is useful for inhibiting the expression of a human RNase HII polypeptide in cells or tissues, as well as for treating an animal with a disease or condition associated with a human RNase HII polypeptide. The method is useful for inhibiting the expression of a protein, particularly for reducing cellular RNA via antisense technology. The present sequence represents human type 2 RNase H given in the exemption of the present sequence represents human type 2 RNase H given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human type 2 RNase H protein sequence SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABP53036;

                                                                                                                                                                                                              The present invention describes a method for promoting the inhibition of the expression of a protein comprising employing a mammalian RNase H polypeptide so that cleavage of an RNA strand of an oligonucleotide-RNA complex duplex occurs. Also described is a compound 8 to 50 nucleobases in length targeted to the nucleic acid encoding the human RNase HI polypeptide, where the compound specifically hybridises with and inhibits the expression of a human RNase HII polypeptide. The compound, which is an antisense oligonucleotide, is useful for inhibiting the expression of a human RNase HII polypeptide or tissues, as well as for treating an animal with a disease or condition associated with a human RNase HII polypeptide. The method is useful for inhibiting the expression of a protein, particularly for reducing cellular RNA via antisense technology. The present sequence represents a human RNase H protein sequence, given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of a mammalian, particularly human, RNase H, for treating an with a disease or condition associated with a human RNase H, for inhibiting the expression of a protein, or for reducing cellular

It is expressed in nervous, reproductive, gastrointestinal, cardiovascular and haematopoietic/immune tissues. It has cytostatic, immunosuppressive, antiinflammatory, antiarteriosclerotic, hepatotropic, keratolytic, neuroprotective, antipsoriatic, anti-HIV, antiallergic, antirheumatic, virucide, antiarthritic, opthalmological and antimicrobial activity. RNAAP antibodies are useful for diagnosis of diseases associated with altered expression or activity of RNAAP. It is used to treat cell proliferative, autoimmune, inflammatory and infectious disorders, like actinic keratosis, bursitis, arteriosclerosis, arthrososis, hepatitis, myelofibrosis, mixed connective tissue disease (MCTD), psoriasis, primary thrombocythemia and cancer, HIV, allergies, rheumatoid arthritis, uveitis, Crohn's disease, and bacterial, viral and parasitic infections
                                                                                                                                                                                                                                                                                                                                12-FEB-2001; 2001US-00781712.
                                                                                                                                                                                                                                                                                                                                                                                           12-FEB-2002; 2002WO-US004243.
